JIANG WEI

Front-End Developer
Shanghai, China | Bio-17621901054 | cn.jiangwei.1997@gmail.com
Personal Website：https://motiandalou.github.io/wei.jiang | Github：https://github.com/motiandalou

SUMMARY

- **Over 5 years of front-end development experience, with the ability to quickly learn and implement new technologies. Adaptable to the fast-paced and ever-changing challenges of startup environments.**

- **Able to independently analyze and solve complex problems, with the full capability to lead front-end projects from 0 to 1 and launch.**

- **Strong communication skills, passionate about remote work, and experienced in cross-timezone and cross-cultural team collaboration. Available 24/7 for communication.**

- **Highly self-driven with a product mindset, proactive in identifying issues and driving optimizations. Strong sense of responsibility and committed to taking full ownership of project outcomes.**

- **Passionate about minimalist design and exceptional user experiences. Strong aesthetic sense with a keen eye for product details.**

- **Technical Stack: React, Vue, Node.js, HTML/CSS/JavaScript**

PROJECT

1. Auto Video Speed (Google Extension) 2025-06 - NOW
Gap Year
https://github.com/motiandalou/auto-video-speed

Personal Open-Source Project | Live

Project Introduction

A Chrome extension that automatically adjusts video playback speed, eliminating the hassle of manual speed adjustments every time. It supports speed control, volume adjustment, skipping intros, and blocking certain ads to achieve the online video viewing experience.

Features

- Automatically set playback speed (customizable to 1.25x / 1.5x / 2x, etc.)
- Automatically set initial volume
- Skip video intros and outros
- Block certain in-page ads
- Block subtitles for English listening practice
- Supports various mainstream video platforms, such as Bilibili, YouTube, etc.

2. ImageGrabber (Google Extension) 2025-04 - NOW
Gap Year

Personal Open-Source Project | Live

Project Introduction

A Chrome extension that allows users to instantly capture and download all images on the current webpage. It supports batch selection, preview, filtering, and downloading, boosting the efficiency of designers, front-end developers, and collectors.

Features

- One-click capture of all image resources on the webpage
- Multi-select/Select All feature for one-click download
- Compatible with most image websites and e-commerce platforms

3. Pink Magic(VSCode Theme Extension) 2025-04 - NOW
Gap Year
https://marketplace.visualstudio.com/items?itemName=wei-jiang.pink-magic

Personal Open-Source Project | Live

Project Introduction

Independently designed and developed a VSCode dark theme, with color inspiration drawn from Cyberpunk and Millennial Pink aesthetics. It covers all syntax elements and UI components.

Features

- Compatible with mainstream languages like TypeScript, JavaScript, HTML, CSS, JSON, etc., ensuring a great development experience and readability
- Submitted and published on the VSCode official plugin marketplace, supporting one-click installation and theme switching

4. dragmate (NPM Package) 2025-04 - NOW
Gap Year
https://www.npmjs.com/package/dragmate

Personal Open-Source Project | Live

Project Introduction

Developed a cross-framework drag-and-drop functionality npm package, supporting React, Vue, Angular, and native HTML, designed for multi-platform project reuse.

Features

- Utilizes modern JavaScript and Web Components technology to encapsulate cross-framework drag-and-drop functionality
- Compatible with React, Vue, Angular, and native HTML, ensuring easy integration and good performance
- Comprehensive documentation and example code for easy onboarding for developers
- Published on npm, with continuous version updates and community feedback

5. ONE2DATA(React) 2025-03 - NOW
Gap Year

Project Background

Based on the Vue version of the ONE2DATA system I previously worked on, I used my spare time to refactor the project with the React tech stack, aiming to improve my front-end architecture design and modern technology application skills.

Project Goals

Rewrite core functional modules, implement internationalization, multi-theme support, and login authentication, while optimizing code structure and performance.

Key Actions

- Redesigned components using React, Redux, and Hooks to improve code reuse and maintainability
- Encapsulated Axios requests and error handling to ensure smooth front-end and back-end data interaction
- Integrated internationalization and multi-theme switching features to enhance user experience
- Simulated interface integration with a Node.js back-end service, practicing the complete front-end and back-end collaboration process

Project Outcomes

The project is still in development, but major functional modules have been completed, resulting in significant improvements in performance and code quality.

Technical Stack

React, Redux, Hooks, Axios, Node.js, Internationalization, Multi-theme Support.

6. ONE2DATA (Vue2) 2022-02 - 2024-05
Shanghai Dunyi Technology Co., Ltd.

Project Background

The company developed an in-house, millisecond-level data backup and recovery system aimed at clients in the healthcare and financial sectors. It supports both single-node and cluster backup, ensuring the security and high availability of critical business data.

Project Goals

Responsible for the overall front-end refactoring and system design, implementing key features such as internationalization, theme switching, and dual-token login, to improve system stability and user experience.

Key Actions

- Collaborated closely with UI, product, and testing teams, participating in the overall architecture design and development of the project from 0 to 1
- Implemented internationalization and multi-theme skin switching, encapsulated WebSocket communication to support long/short tasks and real-time multi-page push notifications
- Re-packaged Element-UI components (including el-table, el-form, button, alert, etc.) to enhance component reusability and usability
- Encapsulated a general-purpose Axios request and utility library, implemented code obfuscation and encryption to ensure code security
- Developed drag-and-drop components and data state control logic, implementing dynamic button graying and lighting to enhance the interactive experience
- Contributed to the development and maintenance of core modules, including disaster recovery clients, backup modules, tenant management, authorization settings, and large-screen displays

Project Outcomes

Successfully completed the project refactoring, significantly improving system performance and interactive experience, gaining client recognition, and ensuring efficient backup and recovery of critical business data.

Technical Stack

Vue 2, Element UI, WebSocket, Axios, Code Obfuscation, Component Encapsulation, Internationalization, Multi-theme Support

7. China Eastern Airlines Official Website (Vanilla JS) 2021.11 - 2022.1
Shanghai Hanyin Information Technology Co., Ltd.

Project Background

Developed an internal employee portal for China Eastern Airlines (CEAir), aimed at displaying information and visualizing data, supporting customized content access based on different user roles.

Project Goals

Responsible for front-end chart creation and page interaction development, ensuring cross-browser compatibility and precise access control.

Key Actions

- Developed charts using native JavaScript, jQuery, and ECharts, completing data integration with backend APIs
- Implemented tab switching, image carousels, dropdown menus, single-line text hiding, and a five-based responsive layout to ensure a good user experience
- Designed and implemented access control functionality, dynamically displaying different module content based on user roles to enhance system security

Project Outcomes

The project was successfully launched, enabling internal employees to efficiently access personalized information and data reports, improving work efficiency and user satisfaction.

Technical Stack

JavaScript, jQuery, ECharts, Flex Layout, Access Control.

8. Aggregation Backend Management (React) 2020.4 - 2021.10
Shanghai Hanyin Information Technology Co., Ltd.

Project Background

A third-party payment client project undertaken by the company, developed a backend management PC system based on React to replace the client's native solution, aiming to improve maintenance efficiency and the development experience.

Project Goals

Responsible for the development of the product management module, implementing comprehensive product data management features, and enhancing system usability and code quality.

Key Actions

- Built the page structure using the React ecosystem and the Ant Design framework, completing the dynamic interaction design and implementation of the product module
- Used Axios for asynchronous data requests to perform CRUD operations for products in the card reader business scenario
- Refactored component logic with React Hooks to improve code reusability and readability, facilitating future maintenance and feature expansion

Project Outcomes

Successfully delivered the product management module with clear code structure and strong maintainability, contributing to the stable operation and future iteration of the client's backend system.

Technical Stack

React, React Hooks, Ant Design, Axios

9. Hanyin Payment Backend Management (Vue) 2019.9 - 2020.3
Shanghai Hanyin Information Technology Co., Ltd.

Project Background

To enhance the user experience and maintenance efficiency of a third-party payment company's backend management system, the system was refactored using the Vue ecosystem. The UI was redesigned, covering core functionalities such as order management, merchant management, report management, and product management.

Project Goals

Responsible for the development of the product management module and system role-based access control module, ensuring the completeness of business functionality and the security of access control.

Key Actions

- Used Vue + Element-UI to complete page layout and dynamic interaction development, improving UI friendliness
- Implemented CRUD functionality for products using Axios, handling data requests for card reader-related business modules
- Implemented a Token-based login and registration authentication mechanism to ensure system security
- Used Axios to retrieve role and position data, combining v-if/v-show for frontend access control, achieving fine-grained role management

Project Outcomes

Successfully delivered the refactored backend system, with stable and reliable product management and role-based access control functionality. The system's security and business flexibility were significantly enhanced, earning recognition from the team.

Technical Stack

Vue.js, Element-UI, Axios, Token Authentication, Frontend Access Control.

10. Internal Operations Management Backend System (React) 2019.2 - 2019.8
Shanghai Hanyin Information Technology Co., Ltd.

Project Background

This project is an internal backend management system for the company, supporting daily operational tasks such as content review, user management, order management, and data statistics. The system needs to be efficient, stable, and easy to maintain, with continuous iteration and optimization in collaboration with multiple departments.

Project Goals

Responsible for building the backend system framework, developing core modules like user management, role-based access control, and order review, to improve system usability and development efficiency.

Key Actions

- Designed and implemented the front-end framework using React + Ant Design, encapsulating reusable form and modal components to ensure UI consistency and reusability
- Integrated the company's internal unified access control system to implement fine-grained role-based access control (RBAC)
- Used Redux + Redux Thunk to manage complex states, ensuring data synchronization and consistency
- Developed data tables supporting pagination, sorting, filtering, and batch operations, with dynamic field configuration to meet diverse business requirements
- Integrated multiple backend microservices, encapsulating request logic and error handling to improve system stability
- Worked closely with product and testing teams to continuously iterate and optimize user experience and system performance

Project Outcomes

The system was successfully launched, significantly enhancing operational efficiency and data management capabilities, providing stable and efficient backend support to various departments, and receiving high recognition from both the team and management.

Technical Stack

React, Ant Design, Redux, Redux Thunk, Microservices Integration.

11. Internal Company Large-Screen Project (jQuery) 2018-07 - 2019-02
Shanghai Hanyin Information Technology Co., Ltd.

Project Background

To meet the company's need for visualizing daily transaction data, a large-screen display system was developed to present core business data in real-time, such as transaction counts, amounts, and merchant distribution. The system was deployed on six large splicing screens for leadership presentations and internal displays.

Project Goals

Responsible for developing the front-end graphical presentation and interactive logic of the large-screen system, achieving real-time multi-dimensional data refresh, carousel switching, and visually appealing layout.

Key Actions

- Used native JavaScript, jQuery, and ECharts to render data charts, including transaction line charts, geographic heat maps, and real-time bar charts
- Integrated backend API interfaces, implemented timed polling and data linkage logic, ensuring data is updated in real-time every minute
- Implemented automatic tab switching, adaptive layouts, and text scrolling effects for interactive details
- Optimized the adaptation effect of the six splicing screens using Flex layout, ensuring stable display on 1080p large screens
- Independently completed all front-end functionality development and testing, collaborating with the backend for integration and deployment

Project Outcomes

After the system went live, it significantly improved the company's data visualization efficiency and became a crucial platform for daily displays and quarterly reports, receiving unanimous praise from the operations and management teams.
